BOOK PROJECT	Lachapelle, Erick. <i>Climate of Change in Canada : Economics, Politics and Weather</i> . This manuscript examines the ways in which social and political actors have responded to the issue of climate change in a major fossil fuel producing country, Canada. Drawing on theories of risk and reflexive modernization, the study examines changes in the behaviours, attitudes and practices of Canadian governments, business, and civil society in the face of large scale global climate change. Analyzing activities undertaken at the global, national, regional and local levels, it highlights the role of economic cycles, experience with weather, and the elite partisanship in motivating societal responses to this global problem. <i>To be submitted to MIT Press in Fall 2017.</i>
